

Do You Live Without Access To Safe Water?  
1.7 Million Deaths Per Year Can Be Attributed To Unsafe Water Supplies.

**TWENTY-FIVE PERCENT OF THE WORLD'S POPULATION LIVES WITHOUT ACCESS TO CLEAN, SAFE WATER**

Without food, the human body can live for weeks, but it can only survive for a few days without water. As of 1995, more than one billion lives, world-wide, were effected by lack of safe water for drinking, personal hygiene, and domestic use. When 25% of the world's population is at risk-inequality matters. Water is essential for life and providing safe water for all is an essential issue.

**Inequality matters.**

This initiative was made possible by the generous support of more than 16,000 AIGA members in 54 chapters and more than 150 student groups nationwide; the Human Development Report Office for the United Nations Development Programme; and designers everywhere who believe in the power of design for the public good.

**AIGA**

A public service  
initiative of AIGA.
